AML and PB Series Switches and Indicators

AML Series: Features: MICRO SWITCH™ AML Advanced Manual Line combines functional flexibility with electrical versatility to provide a broad range of options to choose from.
Installation: They snap in from the panel front individually or in vertical or horizontal strips; or in sub panel mounted strips and matrices that can be pre-assembled and pre-wired to assure accurate alignment and efficient panel building.
Characteristics:

- UL recognized, CSA certification
- Electrical/Mechanical Life: 25,000 cycles

PB Series: Features: These switches resemble the touch-feedback design, but have a flexible leaf actuator for lower operating force and shorter button travel. An elastomer seal is bonded between actuating plunger and button collar. An O-ring seals the button assembly to the panel front.

Joysticks

1000 Series: Are robust, switch joysticks. Based on industry standard V3 and V4 microswitches, they can switch 6A, 10A or up to 16A. The 1000 Series are ideal for general machine control type applications where the user is directing equipment at a predetermined speed

4000 Series: A range of highly versatile, single, dual, or tri-axial, proportional joysticks. Unlike other potentiometer based joysticks, the 4000 Series has an all-metal mechanism for maximum possible robustness and performance over life. The range employs high quality, plastic conductive film potentiometers as standard, and is designed as a sub-panel mount unit. The 4000 Series is ideally suited to medium duty applications such as electric vehicle control. This series remains the preferred choice for applications which require a life greater than five million cycles and absolute immunity to RFI.

5000 Series: Are a family of cost optimized, potentiometer joysticks. With particular attention paid to the style of the unit and a low installed depth, these joysticks are ideal for lighter duty applications such as CCTV keyboard control.

9000 Series: Offers a range of single, dual, or tri-axial products, utilizing contactless sensing to give highly repeatable proportional signals that do not degrade with use. The 9000 Series also offers a range of electronic features including dual decode technology providing for electronic "at-centre" or "internal fault" detect, which makes it the ideal user interface for complex and safety critical applications such as materials handling or power chair control.

RAFIX 22 FS

RoHS COMPLIANT

The RAFIX 22 FS control component range can be combined on a common printed circuit board together with short-travel keys and other components thanks to its extremely small mounting depth of 9.2mm The actuators and signal indicators are fastened to a front panel with a threaded ring in a 22.3mm panel cut-out. The contact blocks are soldered onto the PCB. Illumination of the actuator is provided by a 3mm LED inserted into the base of the contact block and soldered to the PCB together with the contact block.

Industrial Control Switch Modules

C&K Components introduces a family of switches for severe operating conditions and heavy-duty applications, such as industrial controls, farm machinery and off-road vehicles.

The AR3 and AR5 Series analog rocker switches provide an ideal proportional function solution and are cost-effective for off-road vehicle applications. Both feature Hall-Effect contactless sensing, with one sensor as standard and an optional second sensor if required.

The SR3 Series is for typical switching functions in off-road machinery, such as dashboards, armrest controls or multifunction grips. These robust rocker switches, based on highly reliable K12 switch technology, have an operating cycle of more than one million cycles.

ESM and DSM Series are single and double switch modules, supplied ready to install with optional cables or connectors. Both modules are protected by silicon rubber caps and sealed to IP65 when mounted.

The RS and QS Series are designed for use in front panels, multi-function grips or other switching units, the QS and RS Series switches provide tactile feedback and positive snap-point action.

Vandal-Proof MSM Switches

The MSM Vandal proof stainless steel switch is available in 16, 19, 22 and 30mm. This robust switch is built for tough environments and carries a water-resistant rating of IP67, making it ideal for use in equipment exposed to the liquid spills, drips, leaks or wash-downs. The MSM series provides maximum switching power over a voltage range of 30 VDC ~ 250 VAC and a current range of 0.1 ~ 10 amps. Impressive impact resistant ratings of IK06 for the 16mm and IK07 on the 19, 22 and 30 mm sizes makes it ideal for use in environments where the switch can be subject to heavy use or impact. The switch can also operate under varying temperature conditions as low as -25°C ~ -40°C and as high as 85°C. A flat front construction of only 1.7mm height provides a nearly flush mounting to the panel surface, which makes it less conspicuous and therefore less likely to be knocked or battered from the side. The MSM's rugged stainless steel construction is available in momentary, latching action, single and double pole versions with additional options such as standard or custom legends and point, ring illuminated or backlighted versions in assorted colors. ***Note: Lettered version (LE) available, please refer to data sheet on Digi-Key website for more information.***

OMRON A16 Series 16mm Switches

RoHS COMPLIANT

The A16 series design allows users to make any switch arrangement needed. By changing the rear switch block, users can have a SPDT or a DPDT with LED or incandescent illumination. Changing the rear switch block or lamp is a snap with Omron's exclusive extraction tool. Panel installation is easy, cut your hole and insert the switch into the front of the panel and fix the lock ring and mounting nut from the back of the panel using Omron's fitting wrench to tighten the nut. Switches are sold as a complete assembly with switch block and lamp options available.

A22 Series Switches

Omron's A22 Series of pushbutton switches offer flexible features not found in other competitors switches. Switch blocks are hand snapped into the back of the switch body enabling the end user to replace, add or modify the switching outputs in seconds. If you need a DP switch simply snap on another switch block to complete your needs. Switch blocks feature screw-recessed (finger safe) terminals to meet both North American and European safety standards. Switches are water, oil and dust sealed to IP65 standards. Switch units come completely assembled and ready for installation. Purchase additional switch blocks for replacement and additions.

LCD 36 x 24 Pushbuttons and Displays

Displaying industry-specific text and graphics with real-time sequencing, the SmartSwitch simplifies and improves complex, multi-decision operations. SmartSwitches can be programmed to display an infinite variety of text, graphics or moving images. Possible applications include industrial control panels, medical equipment, communication systems, audio-video broadcast workstations and simulation equipment. As one of the industry's smallest dot matrix LCD displays, NKK's Display is ideally suited for compact electronic devices that require the display of graphics, text or moving images in tight-fitting locations. The display offers more functionality than a 7-segment display. It is well suited for use in 1U rack mount units and in applications where 7-segment displays and LED matrices do not provide enough information.

HOBBS Key and Push/Pull Switches

The Hobbs key switch is a custom-engineered, environmentally sealed, sliding contact switch. The stainless steel keyhole shroud and the keyhole dust shutter contribute to the durability of the key tumbler assembly while o-rings protect the contact and rotor assembly from moisture and contamination. **Specifications:** • Electrical Rating: 20A @ 12VDC, 8A @ 24VDC (10A @ 24VDC: 084830 07), 4A @ 48VDC • Cycle Life at Design Electrical Load: 25,000 Cycles

The Hobbs push/pull switch is a robust, environmentally sealed, sliding contact switch incorporating two circuits with multiple combinations. The sliding contacts provide positive contact closure and opening when the switch knob is operated. **Specifications:** • Electrical Rating: 20A @ 12VDC ~ 14VDC, 10A @ 24VDC • Cycle Life at Design Electrical Load: 25,000 Cycles

NEW! AMT203 Absolute Encoder and AMT303 Commutation Encoder

The **AMT203** is a 12 bit absolute rotatary encoder with SPI serial bus for working as a slave to an external microprocessor. Direct, incremental A, B, and Index signals are included as an option for high speed operation. The Index occurs once per rotation. The SPI serial bus outputs a position reading that is absolute over a full turn with 12 bit (4,096) resolution.

The **AMT303** is a commutation encoder with standard U, V, W signals and up to 1,024ppr (4,096 counts) of incremental A/B position feedback and Index position signals. These are direct outputs compatible with any device requiring encoder or commutation input. The AMT303-DMK can accommodate brushless motors with 2, 4, 5, 8, 10 or 12 poles. The SPI serial bus allows programming of commutation settings, resolution, BLDC motor pole count and other encoder features. The Incremental Index channel is aligned to the codewheel pattern which is one pulse per 360 degrees. Commutation zero position is programmable by grounding a pin, eliminating a time-consuming and tedious mechanical alignment.

The AMT203 and AMT303 encoders contain two capacitive channels: a Fine channel and a Coarse channel. The Fine channel has 16 wavelengths of a periodic capacitive pattern, while the Coarse channel has 5 wavelengths. Each channel has its own ASIC that interpolates the channels to a resolution of 256 increments per wavelength. A microprocessor on the encoder PCB combines the two channels to achieve the absolute, incremental and commutation outputs depending on the model.

The AMT203-DMK and ATM303-DMK are easy to use demo kits designed for the AMT203 absolute and ATM303 communtation modular encoders. The kits allow for stand alone demonstration or direct access to programmable features in production. They are outstanding tools for experimentation and familiarization with AMT203 and AMT202 features

Fig. 1

The 2200 Series is ideally suited to the needs of Automated Test Equipment and RF requirements. High speed switching compared to electromechanical relays. Hermetically sealed contacts for long life. Epoxy coated steel shell provides magnetic shielding. Optional Electrostatic Shield for reducing capacitive coupling

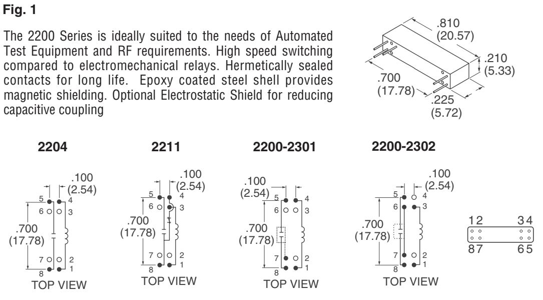

Fig. 2

The Coto 2300 Series was designed to offer the densest packaging available in a multiple reed relay. The size and footprint of the 2300 series compliment the 2200 and 2900 series relays. The 1 Form C model is constructed with individual switch capsules for the normally open and magnetically biased normally closed contacts which are more reliable than the spring actuated 1 Form C reed switches.

The SIP relay is the industry choice for a wide variety of designs where economy, performance and a compact package are needed. The 9007 Spartan Series is a general purpose economy version of the 9001 for applications with less stringent requirements. The 9081 Spartan Series is similar to the 9007, but with alternate industry standard footprints to accommodate other options, including Form C types. These relays are well suited for applications in Security, Instrumentation and Modems.

The SIP relay is the industry choice for a wide variety of designs where economy, performance and a compact package are needed. The 9081C are 2 x SPST-C/O relays offered in industry standard packages. Use 9081C (.2 x .4 x .2) SIP for industry standard footprint applications or 9081C1 (.2 x .2 x .2 x .2) for standard footprint applications requiring a SPDT function. These relays are well-suited for applications in Security, Instrumentation and Modems.

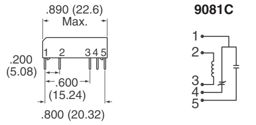

Fig. 8

The 9012 package dimensions are 47% smaller than standard 9000 SIPs, yet the relay retains the 10W switch ratings of its larger counterparts. The 9011 package dimensions are 65% smaller than the standard 9000 SIPs and incorporates the RI-70 switch rated 3W. The 9117 goes one step further, reducing package size by 65% from standard 9000 SIP's. This is the smallest SIP footprint with a 3W rating. These miniature SIP relays are ideal for use in ATE applications and other high reliability test, measurements and telecommunications applications where high board density and long life are key requirements.

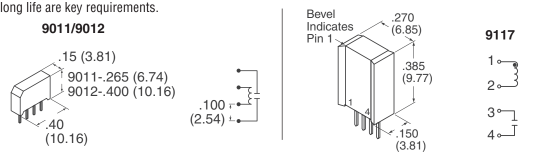

Fig. 9

The 9092 model, because of its increased height, allows for incorporation of 2 form A switches in the same board space. These miniature SIP relays utilize Coto's 10W switch technology, making these SIP relays ideal for use in ATE applications and other high reliability test, measurement and telecommunications applications where high board density and long life are key requirements.

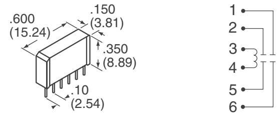

Fig. 10

The 9104 Series adds high voltage switching 1000V capability and high voltage standoff capability to a SIP relay package. These high voltage, high performance relays are ideally suited for Automatic Test Equipment, Instrumentation, and Process Control applications where voltage isolation is a key design requirement.

RF Relays

B10 Relays: Coto's Ball Grid Array (BGA) construction offers a breakthrough in reed relay performance. This patented technology allows for shorter RF paths in a controlled 50Ω environment to minimize signal attenuation. The designer is now able to switch or pass signals with wider bandwidth and faster rise time than alternative technologies.

B40 Series: The B40 is four independent form A channels in one quad package. This 4-in-one BGA packaging allows relays to be integrated easily on boards designed for surface mount processing.

Applications: • IC Testers • In-Line Relay Testers • Memory Testers • Mixed Signal Testers • High Bandpass Applications

Magnetic Reed Switches

Reed Switches consists of two ferromagnetic reeds that when introduced to a magnetic field, attract toward each other to close. Once the magnetic field is removed, the contacts again spring open. Reed switches are ideal in auto, marine and moist environments including water, fuels, and dust-laden atmospheres. The smaller Ampere Turns number, the more sensitive the reed switch to magnetic fields.

Magnets

A permanent magnet is the most common source for operating the magnetic reed switch. The method used to position the magnet depends upon the switching requirement but can be used in one of four basic techniques; perpendicular or parallel motion (up and down, side to side) rotation (revolving magnet or switch), shielding (passing a ferromagnetic material between the switch and magnet) or biasing which is using one magnet of opposite polarity to cancel another magnet's lines of force.

measurement SPECIALTIES Magnetic Sensors

KMY/KMZ Sensors: Due to its featured properties - high sensitivity and almost no hysteresis - the KMY/KMZ sensors are used in a wide range of applications, like magnetic field measurement, revolution counters, proximity detecting, and position measurement. **MS32 Switching Sensors:** The MS32 is a magnetic field sensor which is built in the form of a Wheatstone bridge. Applications: Contactless Position (Presence, Open/Close) Detection in : • Industrial • Consumer • Automotive. **KMT32B/KMT36H Magnetic Angle Sensors:** The KMT32B/KMT36H are magnetic field sensors based on the anisotropic magnetoresistance effect, i.e. it is sensing the magnetic field direction independently of the magnetic field strength. **MLS Sensors:** Sliding the MLS-Sensors along a magnetic scale will produce a sine and a cosine output signal as a function of the position. The sensor detects a magnetic gradient field and is thus almost insensitive to homogenous stray fields.

The magnetic field overcomes the spring tension of the blades and brings the contacts together. When the magnetic actuator is removed, the reeds separate by their own spring tension. Comes complete with reed switch and matching actuator. **FEATURES:** • Long Life Expectancy — 10 million operations • Housing made of rugged impact resistant ABS plastic that meets or exceeds UL requirements for fire retardation • Sealed Contacts allowing the reed to operate in damp and dusty environments • Wide gap performance makes magnet and switch alignment less critical. **SPECIFICATIONS: • Contact Ratings:** 30VDC or 30VAC maximum @ 0.3 Amp Maximum; 1.0 Amp Maximum Carry Current • **Operating Temperature:** -40°C ~ 100°C • **Mechanical & Electrical Life:** 10 Million Operations **MATERIALS: • Housing/Spacer/Cover:** ABS Plastic (UL94V-0), white • **Wire Leads:** UL1061, 22 AWG: stranded, made of copper or aluminum; Length: 12" (30.48cm) with ends stripped; Color: white • **Magnets:** Alnico V and Ceramic Ferrite 8 (MPS80WG model only)

NOTE: Wide gap contacts are polarity sensitive. Use alignment dots for proper installation of surface mount contacts.

Ultra-Mini Reed Switches

SRC Devices Industry unique flat bladed, square reed switches. Ideally suited for small signal to moderate load switching tasks. With sputtered ruthenium contacts and laser-sealed glass, the FR series reed switch from SRC Devices is one of the most reliable reed switches available today. In addition, our square glass and flat leads allow for seamless integration into a high speed, automated assembly process via our standard SMT configuration. SRC Devices reed switches are the only reed switches fully SMT compatible by design, with or without overmolding. The magnetic force (expressed in NI, AT or Ampere Turns) required to cause the reed switch contacts to close is called the pull-in or operate AT.

Magnetic Reed Switches

Reed switches have been used in thousands of applications from non-contact switches to sensing direction, speed and position. Reed switches are a reliable, low cost, low current switch that are hermitically sealed for operation in the most demanding environments. The magnetic force (expressed in NI, AT or Ampere Turns) required to cause the reed switch contacts to close is called the pull-in or operate AT.

Overmolded Reed Switches

All the advantages of the non-molded DYAD®, plus the added strength of a low-stress plastic encapsulation. The SRC Devices Molded DYAD is designed for the harshest, most demanding applications. This plastic shell provides superior mechanical strength, eliminates concerns over handling glass switches, and provides an ideal solution for high speed, automated assembly environments. The magnetic force (expressed in NI, AT or Ampere Turns) required to cause the reed switch contacts to close is called the pull-in or operate AT.

Magnetic Reed Switches, Reed Relays, Reed Sensors and Magnets

Reed Switches: Reed switches consist of two ferromagnetic blades of iron and nickel, hermetically sealed in a glass capsule. The introduction or removal of a magnetic field actuates the Reed Switch. Over 500 reed switches to choose from ranging in size from the ultra miniature 4mm to 52mm. **Reed Sensors:** Reed sensors magnetically actuated proximity switches available in a variety of mounting options. The switching function is activated by the introduction or removal of a magnetic field. **Reed Relays:** Reed relays are ideal for applications requiring low and stable contact resistance, low capacitance, high insulation resistance, long life and small package size. They are also suitable for high RF switching and low current switching.

Solid State Relays

SSR, SSRT, SSRD and SSRQ Series: Potter & Brumfield Models SSR are SPST "Hockey Puck" style solid state relays for general power switching applications. These feature a dual, back to back SCR, Zero-Cross switching output for most inductive and high inrush loads. Parts ending in "R" are random turn-on outputs for phase control applications. SSRD (Dual) and SSRQ (Quad) are multiple output relays where each output is controlled separately. SSRT are SPST "Hockey Puck" style relays with snubber less Triac Outputs for inductive switching and high inrush applications. Enhanced noise immunity (designed to meet level 3 requirements of European EMC Directive). Includes LED indicator and floating terminal design.

SSRA, SSRC, SSRF, SSRK and SSRM Series: Models are available in zero voltage turn-on and random voltage turn-on versions, permitting users to select a relay with the preferred switching characteristics for a given application. Also, they are available in SIP PC board packages or DIN-rail/panel mount packages.

Safety Relays

Safety-implemented circuits must be control reliable as mandated in the U.S. and European safety standards. Safety relays have the function to positively isolate safety circuits of emergency shut-off, machine control, elevator and escalator controls, light barrier control, furnaces, medical apparatus or any application requiring redundant shutoff safety requirements. These relays are designed with force guided contacts where in the event of a fault (1 contact welds closed), the second contact must carry out the switch off condition.

SIP Conformal Coated Solid State Relays

AQ2 SIP SSRs are designed as suitable drivers for AC motors, solenoids, valves, etc. These offer excellent noise resistance with an integrated snubber circuit and ultra thin body (only 9mm) for maintenance-free, long life switching. Zero-Cross is a low noise switching output whereas Phase Controlled are ideal for applications such as motor speed control and light dimming.

MOSFET Relays

Omron's G3VM relays are PCB and SMT solid state switches that are capable of controlling voltages up to 600V. Extremely low input currents, low ON-State Resistance and small packages make these relays ideal for microprocessor and logic switching. Current limiting input resistor required for operation.

Packages include 4, 6 and 8 pin Dip, SMT, or SOP packages or use the extremely small 4-SSOP package for extremely small board space requirements. Relays will switch both AC or DC voltages.

Fig. 1 — G3VM-LR Series

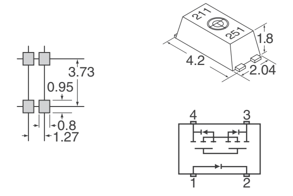

Fig. 2 — G3VM Series

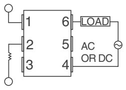

MOSFET relays boast performance with long life, low input drive, and high-speed response to handle minute analog signals with minimum current leakage. The standard G3VM MOSFET relays have dielectric strength of 2,500 VAC between I/O terminals (except SOP relays).

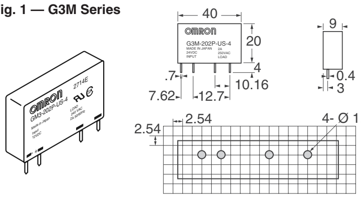
OMRON® Power Solid State Relays

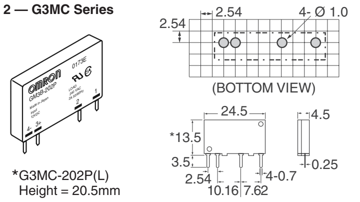
G3M and G3MC relays are larger current relays but offered in a SIP package to reduce board space. Perfect for controlling pumps, alarms, solenoids and other inductive/capacitive loads. Use zero-cross for general power switching or highly inductive loads or use Phase Controlled for output control of motor speed controls or light dimming. The G3R relays are drop-in replacements to the popular G2R Electromechanical relays. Perfect for compact Din-Rail mounting and applications requiring the long life of solid state relays. G3TC series are replacement to standard I/O modules. Replaces Opto22, Gordos and many other I/O modules. Perfect for multiple output controls.

Fig. 1 — G3M Series



Features: • Zero-cross or Phase Control type • Thin design for high-density PCB applications • DC input: AC output for up to a 5A load • Footprint compatible with industry standard I/O modules • Low cost **Characteristic Data:** • Operate time: 1ms maximum • Output ON voltage drop: 1.6V (RMS) maximum • Leakage Current: 2mA maximum (at 100VAC); 5mA maximum (at 200VAC); For G3M-203P: 1.5mA maximum (at 200VAC) • Operating Temperature: -30°C ~ 80°C

Fig. 2 — G3MC Series



*G3MC-202P(L)
Height = 20.5mm

Features: • Low-cost, subminiature, PCB mounting, solid-state relay switching 2A • DC input: AC output for 1A load at 40°C • Mono-block lead frame facilitates heat dissipation without use of heat sink • Smaller Footprint (Approximately 20% smaller than G3MB) is ideal for close PCB Mounting applications • Built-In Snubber Circuit **Characteristic Data:** • Leakage Current: *G3MC-101P*: 1mA maximum; *G3MC-202P(L)*: 1.5mA maximum • Operating Temperature: -30°C ~ 80°C

Fig. 2

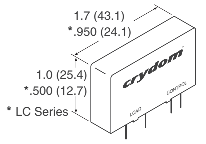
Series D2W

Series CX - CMX

Series D2W • Printed Circuit Board Mounting • Features an epoxy-coated package for exceptional environmental protection • Pinouts are compatible with OAC type I/O modules.

Series CX - CMX • Ultra High Surge • Printed Circuit Board Mounting • SPST-NO relays achieve the highest power switching capability in a PC-mounted air-cooled package. Advanced features include exceptional steady state current, plus ultra-high surge ratings. DC output SPST-NO solid state relays use MOSFET output for high switching capabilities in a PC-mount air-cooled package. Pinouts are compatible with Series 6 and OAC type I/O modules.

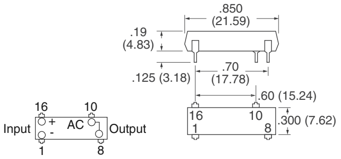
Fig. 3



MCX and LC SIP SSR Relays

The MCX relays are 1.5A rated SPST-NO relays designed for switching highly inductive loads such as solenoids and motor loads. The LC series is a compact low cost series designed with a triac for general purpose switching applications. Both series available in zero-cross or random switching (phase controlled) versions (R suffix).

Fig. 4



Series DPA/SDV/SDI Dip Relays — SCR Output

The series DPA is offered in your choice of voltage or current operated versions and are rated at 1A. The series SDV/SDI’s are rated at 1.5A at ambient temperatures of 40°C. Available in either zero-cross or random turn-on (R) versions and current or voltage operated (controlled) versions. SDV series are voltage controlled and SDI series are current controlled.

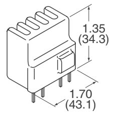
crydom® Solid State Relays and Accessories

Dim. in Inch (mm)

Fig. 1

PF Series

PowerFin™ series delivers the highest ratings of any single in-line package (SIP). The integral heat sink design can operate at 25 amps in forced air, or 10 amps with natural convection. R suffix versions are phase controlled output.



ASPF Series

ASPF SSR incorporates the PowerFin design with an integral heat sink on the compact Mini-SIP package. Rated at 3.0 AMPS up to 45°C, this SPST-NO AC output SSR is for applications where precise electrical power control is essential. Zero voltage or random switching (R suffix) versions are offered.

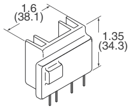


Fig. 2

Crydom's LS family of SPST-NO relays achieves the highest power switching capability in a PC-mounted air-cooled package. Output consists of an SCR AC switch and is available in zero-cross and random turn-on (suffix R).

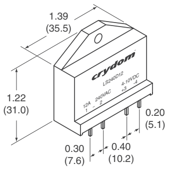

Fig. 3

Relays combine small size and high ratings in a package designed for easy heat sink or panel mounting. Standard .187 push-on terminals assure quick connection and are arranged to provide maximum isolation between signal and power circuits.

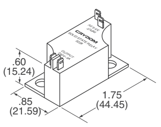

Fig. 4

Series CMD

CMD series uses standard box terminals for reliable long term connections and finger safe screws eliminates the need for a separate protective cover.

A visual LED indicator allows circuit status on the relay. CMD series works with existing Crydom SSR heat sinks.

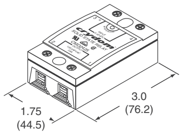

Fig. 5

Series PCV Analog Power Controller

The Series PCV Analog Input Power Controllers are 0-100% variable power controllers for 120 or 240VAC loads which vary with an analog input of 2 to 10VDC. The input and output are proportional by integrating a complete phase fired logic system and a solid state relay in the same package. Applications include heaters and lighting, motors and feeders, etc.

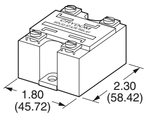

Fig. 6

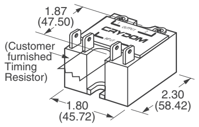
Series DSD, DLD Time Delay Relay

These Delay-On time delay relays offer customers to externally adjust their delay time by selecting the value of the external customer supplied resistor. DSD are short time delays and DLD are longer time delay durations. Timing resistors should be 1/4 watt or higher.



Typical Turn-On Delay For Various Timing Resistances

Resistor	Time (DSD)	Time (DLD)
0 (Short)	0.10 sec.	1.6 sec.
10KΩ	0.19 sec.	3.1 sec.
100KΩ	0.94 sec.	15 sec.
470KΩ	4.0 sec.	64 sec.
1.0MΩ	8.3 sec.	133 sec.

Fig. 7

The MCST series of controls is designed to provide adjustable surge reducing soft-start and soft-stop control for any load which would benefit from a gradual application/shut down and provide Crydom SSR switching within one package. Adjustable ramp times.

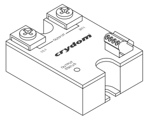


Fig. 8

RPC series proportional controllers provide a cost effective method of controlling power in many different applications such as heaters, universal motors or incandescent lamps. A customer provided potentiometer is all that is required for control.

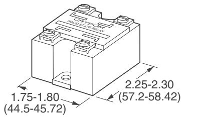
crydom® Solid State Relays and Industrial Controllers

Fig. 1

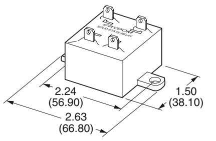


Series 1, HD, HA: • These SPST-NO relays deliver proven reliability in the most demanding applications. Output consists of an SCR AC switch, available in either zero voltage turn-on or random turn-on, phase controlled models. (-10 versions are phase controlled. Crydom part numbers ending in "B" are normally closed versions.)
Series H12: • High voltage relays use IC driven circuits for switching loads up to 660VAC with 1200 Volts blocking standard.

Series 1-DC: • Low On-State Resistance • Paralleling Capability for Higher Currents • DC output relays feature MOSFET technology for low on-state resistance, assuring easy paralleling and switching capabilities to 100 amps at 200VDC.
Series CS: • Low Leakage • SCR AC switch output models feature low off-state leakage (snubberless), zero-voltage switching and a broadened operating range at both 120V/240VAC line voltages.

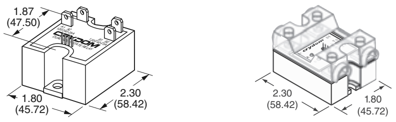
Series CL: • Crydom's new CL series of AC output Solid State Relays is intended for general purpose use in heating, lighting and motion control applications where panel mounting is desirable but traditional heavy duty SSRs are not required. Featuring 4kV all solid state optical isolation with Triac output and an RC snubber network is also included for applications with highly inductive loads or noisy power lines.

Fig. 2



Series EZ: • Low Leakage • Quick Connect Terminals • Offers a low profile package with the convenience of quick connect terminals • 4000 Vrms opto-isolation and low off-state leakage are standard.

Fig. 3 Dual Relay



Legacy Dual

Evolution Dual

Two (Dual) totally independent AC output relays come in a single standard panel-mount package. Utilizing an AC switch output with internal snubber, relays provide greater protection against false triggering. (-10 versions are phase controlled)

CTR *NEW!*

Three-phase solid state relays switch up to 530 Vrms directly to loads such as motors, transformers, heating elements, etc. Models are available with either AC or DC input (coil).

RHP Hybrid Contactor Series

Crydom has combined solid state and mechanical switching technologies to create its line of Hybrid Solid State Contactors. The RHP contactors provide the performance advantages of both technologies in an industry standard DP contactor package. Crydom's proven Hybrid SSR technology utilizes contactless solid state turn on and turn off performance, coupled with the very low on state power dissipation characteristic of contactors. Available in single and 3 phase versions. They are the perfect "mercury-free alternative" to replace MDRs.

• Opto-Isolated • Solid state I/O switching modules deliver an electrically clean, photo-isolated, noise free "output" interface from logic level control systems to external loads such as motors, valves, solenoids, etc. DMP versions are epoxy conformal coated for fast heat transfer.

Series 6

Series 6 buffered output modules contain additional internal amplification to reduce drive requirements to a level suitable for the Mos devices used in many microprocessor systems. Models are available with either inverting or no-inverting inputs, for 5 and 15 volt logic.

MCTC SSR Temperature Controller

The Crydom MCTC is a unique self-contained state of the art basic temperature controller that combines all the necessary functions into one easy to set up and use standard size package. The MCTC is ideal for temperature control users that do not need multiple built-in options, displays and functions that they will never use. The unit incorporates an internally compensated thermocouple input (J or K), available temperature range of 100°F ~ 500°F, with adjustable set point using analog voltage of 0 ~ 5VDC. With integrated zerocross burst firing, and proportional derivative control to avoid set-point overshoot, the unit also includes 2 LED status indicators for visual reference of operation and set point conditions.

Tight Seal IP68 Nylon Cable Grips (Glands) with Lock Nuts

RoHS COMPLIANT

Application:
The use of synthetic cable grips is almost unlimited within the electrical and electronics industry. Installations where cables must be led safely through a wall of an enclosure will be specified with cable grips. Synthetic cable grips are specified to: • Secure the cable to the enclosure's wall to provide excellent pull-out resistance. • Seal and protect the inside of the enclosure from the unwanted affects of the environment. These contaminants may be water, gas, chemical vapors, or fumes. • Reduce material cost due to use of lighter, less expensive materials, as well as, eliminating the need for running conduit.

Technical Data:

- **Material:** Polyamide PA 6, Self-Extinguishing, Halogen-free
- **Seal:** Neoprene, Oil, and Petroleum Resistant
- **Operating Temperature:** Static (-40°C ~ 100°C), Dynamic (-30°C ~ 80°C)
- **Safety Class:** IP68, Waterproof (5 Bar)
- **VDE Test Report:** 12 796-9000-4001/A 2 J

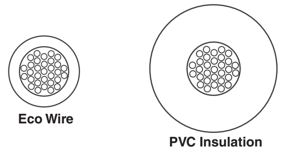
NEW! Eco Wire™ Hook-Up Wire

RoHS COMPLIANT



Alpha Wire's Eco Wire is the latest innovation in hook-up wire. Eco Wire combines increased performance with a minimized environmental impact. Eco Wire derives its advantage from patented Noryl insulation, a modified polyphenylene ether (mPPE) thermoplastic. Noryl is inherently lighter, tougher, and more durable than PVC. The result is UL AWM wire that is smaller than PVC-based counterparts.

Materials: • Conductors: Stranded • Insulation: Noryl modified polyphenylene ether

Operating Temperature: -40°C ~ 105°C

Approvals: REACH compliant

3M Heat Shrinkable Tubing

MFP®, EPS-300, SFTW202 GYS, SFTW203, 8420 and 8440 Series

MFP Series-Modified Polyvinylidene Fluoride: • **Shrink Temperature:** 175°C (347°F) • **Color:** Clear • **Shrink Ratio:** 2:1. Cross-linked, thin-walled tubing offers a high degree of mechanical strength and high temperature resistance. This has outstanding abrasion resistance and cut-through properties in combination with high dielectric strength. It is inherently flame retardant, semi-rigid and highly resistant to most industrial fuels, chemicals and solvents. KYNAR is a registered trademark of Elf Atochem North America, Inc. **EPS-300 Series-Adhesive-Lined Flexible Polyolefin:** • **Shrink Temperature:** 121°C (250°F) • **Color:** Black • **Shrink Ratio:** 3:1. Rapidly shrinks to a skintight fit, forcing the melted adhesive to flow and cover the substrate. The adhesive forms a flexible bond with a wide variety of rubbers, plastics and metals. Upon cooling, the adhesive solidifies forming a permanent, non-drying, flexible and water resistant barrier. **SFTW202 GYS Series-Very Flexible Polyolefin:** • **Shrink Temperature:** 100°C (212°F) • **Color:** Green and yellow striped • **Shrink Ratio:** 2:1. Meets performance requirements of MIL-I-23053/5 Class 1, and is UL Recognized (File No. E48398) for flame retardance. Can be easily surface painted. **SFTW203 Series-Very Flexible Polyolefin:** • **Shrink Temperature:** 100°C (212°F) • **Color:** Black • **Shrink Ratio:** 3:1. Meets performance requirements of MIL-I-23053/5 Class 1, and is UL Recognized (File No. E48398) for flame retardance. Can be easily surface painted. **8420 Series-EPDM and 8440 Series-Silicone Rubber Tubes:** • **Color:** Black (8420 Series) and Gray (8440 Series). Cold Shrink™ Insulators-Open-ended, tubular rubber sleeves that are factory expanded and assembled onto a removable plastic core. Provides a reliable seal without the use of heat, a torch or adhesive - simply position and unwind the core allowing the tube to shrink and form a water-resistant seal.

Butyl Rubber Shrink Tape

DAFLEX ST250 cold shrinking Stretch-N-Seal tape requires no heat to provide a secure covering where the size and/or shape of an object does not permit the use of shrinkable tubing. Simply remove 2" to 3" of tape from the roll, remove the liner, stretch tape to 50% of the supplied width and wrap it spirally around the object, with 50% overlap. In minutes the tape will react with itself to form a mass which will provide protection from moisture, most chemicals, over 1KV per mil. DAFLEX ST250 can be removed easily without leaving any residue since the tape does not use a mastic or adhesive liner. Shelf life is over 5 years. It is helpful for covering, sealing, splicing, holding bundles, joining and repair applications.

Specifications: • Operating Temperature: -40°C ~ 130°C • UL Approved for 100°C

NEW! Multi-layer Piezo Speakers

PUI Audio announces a type of speaker that reproduces sound, voice or music and it’s only 1mm deep. This multi-layered piezo speaker is available in two different types; one is frame mounted for use in open air applications and one with double-sided tape that is used for flat panel mounting. Both types offer a frequency range of 300 ~ 20000Hz along with the low current draw of traditional piezo devices. The small size allows them to be mounted where other devices are too thick such as touch panels displays, camera equipment or other hand held devices.

NEW! Evaldi™ Earphones

RoHS COMPLIANT

They aim to provide "3-Dimensional" sound that is equivalent to listening to a set of high-end home stereo speakers. The secret is in our patented airstream-control technologies that enable the transmission of both sharper high tones and lower bass sounds without interference. This line also provides superior comfort and ways to customize your sound experience. An inclined stem with elliptical shape is employed to better fit ear canals, while a choice of ear pads provides users different levels of bass and noise isolation. Includes Y-type cable.

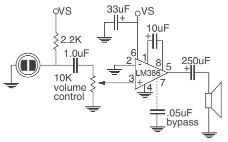
Panasonic® Electret Condenser Microphone Cartridges



Consists of a high voltage internal electret membrane, metal electrode and a Field Effect Transistor (FET). Doesn't need a high-voltage bias from the outside like ordinary condenser microphones. **Features:** Highly efficient electrical specification, pressure type operating principle, low impedance (2.2kΩ), omnidirectional back directivity and a high degree of reliability under adverse shock, vibration and environmental tests. **Applications:** Telephone and telephone answering devices, tape recorders, intercoms, computer modems, completed microphones for recording, testing and monitoring, hearing aids, sonic controlled toys and sensors and others. All buzzers and microphones are non-washable.

Ultrasonic Acoustic Sensor

The Ultrasonic Acoustic Sensor utilizes the latest technology MEMS (Micro Electro Mechanical Systems) to provide a robust mechanical acoustic sensor which performs over a wide environmental range. Compared to conventional Ultrasonic Sensors that have a narrow frequency band of detection, the Knowles sensor is ideal for capturing a wide frequency range applicable to a variety of ultrasonic applications: Ultrasonic Range Detection, Condition Monitoring, Fault detection, Level Sensing and Position Sensing. The sensor can be utilized to monitor and detect frequencies from 10kHz ~ 65kHz with minimal attenuation across the frequency range.
